

Find the right Glysantin® product for your automobile here

**"Learn the most
important basic rules
on cooler protection
from me."**

- Water alone is not enough to cool the system – only when it is mixed with protective Glysantin® concentrate can damage be avoided. The problem? Water without coolant concentrate expands when it freezes, boils at 100 degrees Celsius and causes rust to form more quickly.
- Never use undiluted coolant! With this mixture, you'll always be in safe hands: Glysantin®/Water: 50/50 (1/1 parts).
- Never mix coolants containing different technologies or coolants made by different manufacturers!
- You can find further information and tips about the right Glysantin® product for your vehicle on our 32 language bottle label or in the internet at: www.glysantin.com

"Always remember the following"

- Always completely change the coolant during repairs (flush and clean cooling system beforehand).
- With older cars, change coolant every 3 to 4 years.
- Use clean (not too hard) tap water, fully deionized or distilled water.
- Read your vehicle manufacturer's instructions.

Glysantin[®]: The 3-fold premium protection for the cooling system

Comprehensive protection against
corrosion, overheating and frost
